PROFESSIONAL QUALITY
HAND TOOLS BRAND LEADERS

Honiton Industries Inc.

INTRODUCTION of HONITON

Founded in 1979, HONITON INDUSTRIES INC. (the "Company") used to be one of the leading Taiwan hand tools manufacturers in the old days. Undergoing the industrial manufacturing transformation phase in Taiwan, the Company commits to enforcement of refinement and advancement of the quality and engages in mass production of high-hardening high-tenacity alloy steel. The prime quality in bulk heat treatment renders the Company qualified as one of the leading Taiwan hand tools manufacturers currently.

Upon completion of the applied industrial steel transformation, the brand was launched and the scope of finished items was widened. This is how HONITON made its own debut. The brand management aims at provision of a hand tool to be used confidently with prime bulk used and precise procedures adopted for the top quality of each finished item made by the Company.

The Company not only is the sleeve manufacturer but also has its own wrench production line in the same factory. That is, the first and second main series are sleeve and wrench production lines. As a prime manufacturer specialized in sleeves and wrenches, the Company runs the business unconfined to only the existing sleeve production line but the newly launched wrench production line as one of the essential hand tools that widens the scope of the sold items made by the Company.

The Company is capable of quality R&D and good at making newly developed items. In 2004, the HONITON patented gear-tooth HONIDRIVER made its own debut. The applied scope covers as follows: sleeves, spark plugs, spanners and ratchets. The multi-purpose spanner can amply unscrew the nuts in the hex (mm / inch) screw, TORX screw, 12R screw, SQUARE screw and Triangle screw kits.

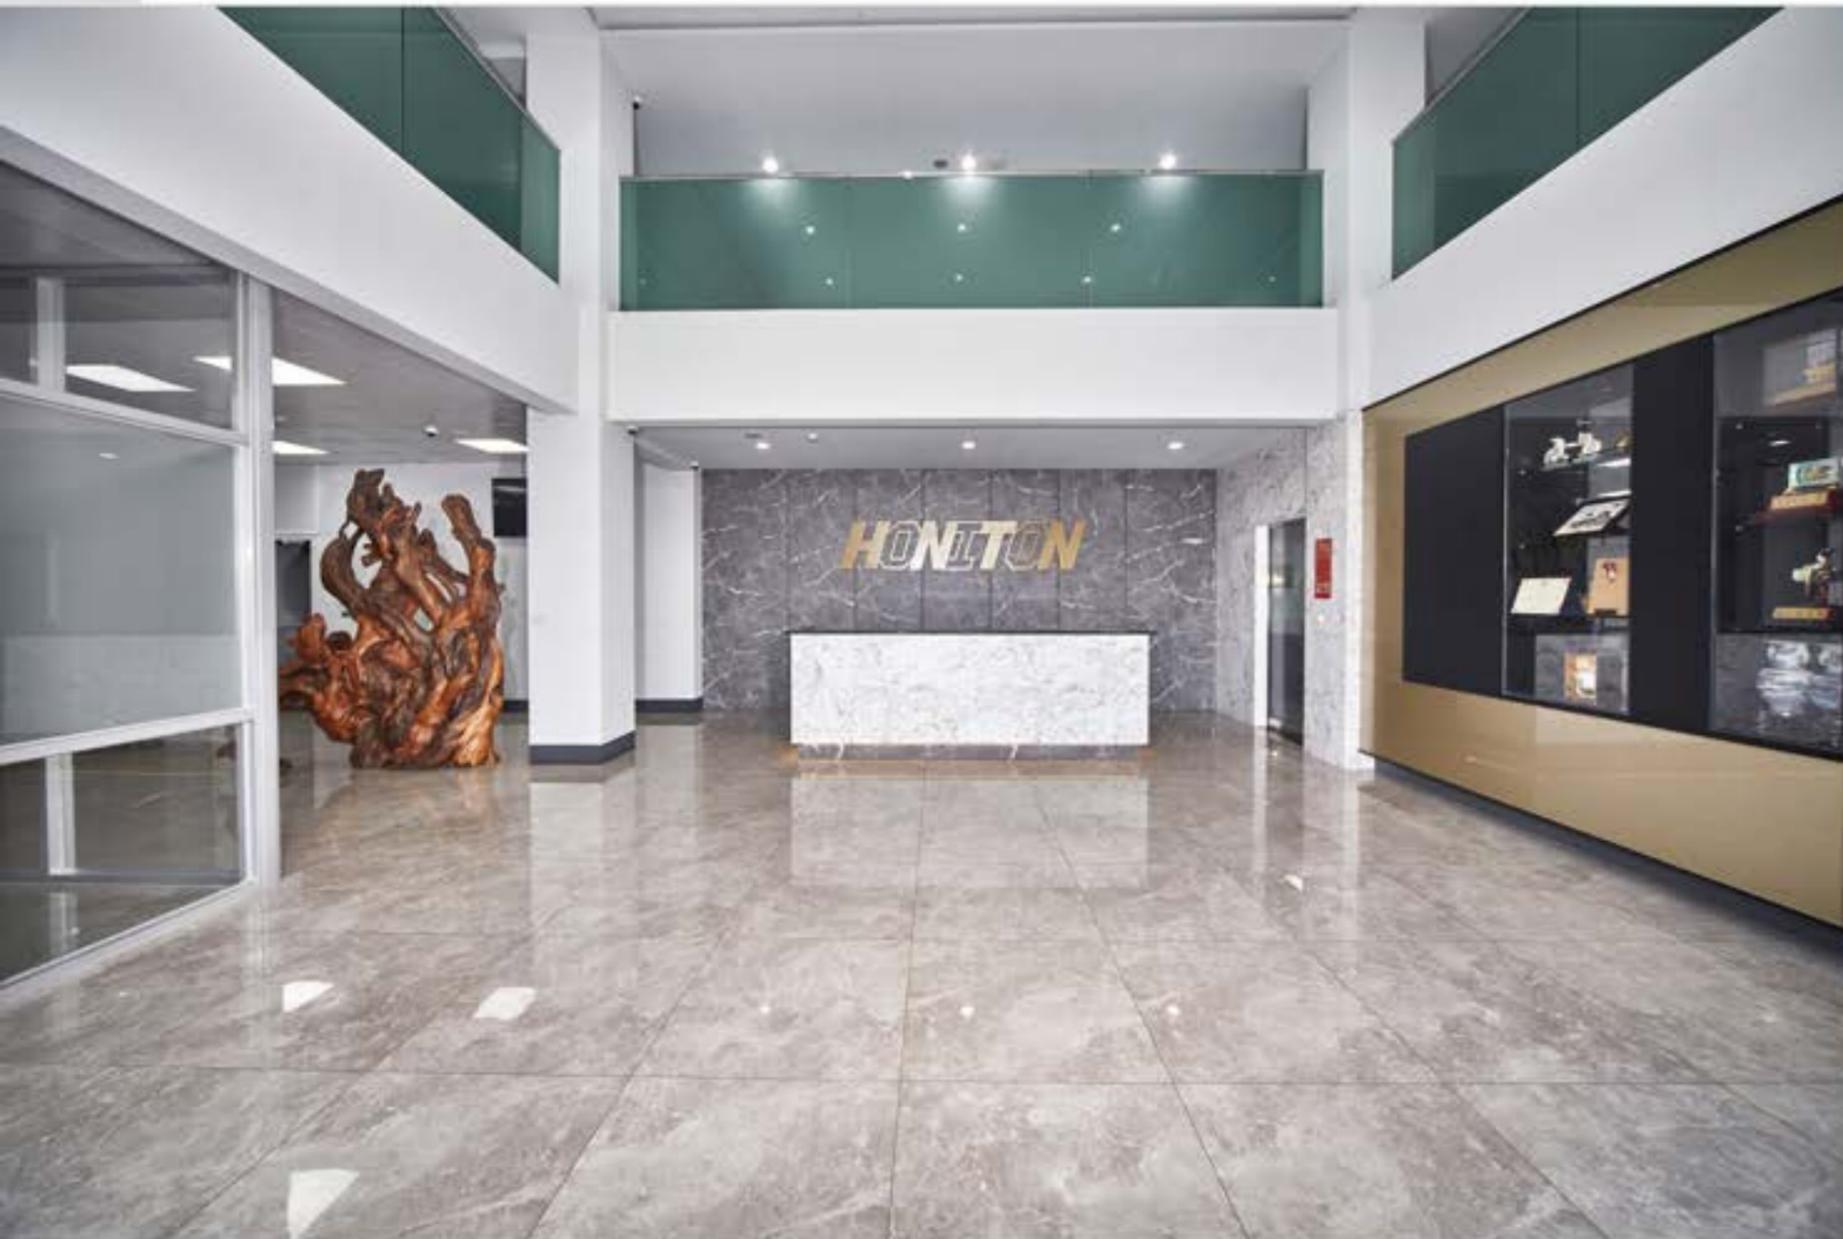

In 2020, the Company was relocated at a newly built factory situated at Taiping District of Taichung City ranging 52,756 square meters. The scheme that had been planned for over the past decade aims at integration and optimization of the existing production lines. The plural processes in the forging, grinding, lathing, milling, knurling, punching and reshaping phases newly integrated and optimized make the production moving line more ideal. In addition, the edgy production equipment invested by the Company for more automated and precise devices is the actualization of the strict requirement of finished items to which HONITON is committed.

- Construction of renewable energy
- The solar panels were installed all over the roof.
- The abundant greenbelt is planned all over the complex.
- The Company-made energy-saving policy is enforced for the UN sustainable development goals.

The privately run production lines are capable of both OEM and ODM orders: in receiving an OEM order, the highly OEM-dedicated production line secures the flexibility of each custom item that surely and amply can meet the demands of the client; in receiving an ODM order, the one-stop outsourcing service can be made available to the client since the company is capable of private R&D, design and production. If you are looking for an extremely trustworthy & powerful manufacturer to cooperate with, HONITON is definitely, the best partner you could count on.
